

Final Model Export & Analysis Report

This report collects the generated machine- and human-readable artifacts for easy review and sharing.

- **Model Summary (JSON):** [model_demo_info.json](#)
- **Analysis JSON:** [reports/model_analysis.json](#)

Analysis Images - Parameters histogram: [reports/params_histogram.png](#) - **Top layers (by params):** [reports/top_layers.png](#) - **Trainable vs non-trainable:** [reports/trainable_pie.png](#) - **Params by layer type:** [reports/params_by_type.png](#)

Architecture Visualizations - Networkx fallback (SVG): [model_graph_networkx.svg](#) - **Networkx fallback (PNG):** [model_graph_networkx.png](#)

Interactive Viewer Screenshot - Netron screenshot: [netron_screenshot.png](#)

Notes & Next Steps - The original `torchviz` → `Graphviz` rendering produced DOT syntax errors for some labels; a sanitized approach (remove param-name labels) or further label-escaping may allow regenerating the original SVG in the future. - To regenerate artifacts locally, run:

```
.venv\Scripts\python model_inspector_demo.py
.venv\Scripts\python analyze_model_json.py
.venv\Scripts\python viz_networkx.py
# Start Netron (separate shell):
.venv\Scripts\netron resnet18.onnx --host 127.0.0.1 --port 8080
# Capture Netron (in another shell):
.venv\Scripts\python netron_capture.py
```

Files are workspace-relative and ready for review or packaging.
